Gold Bar

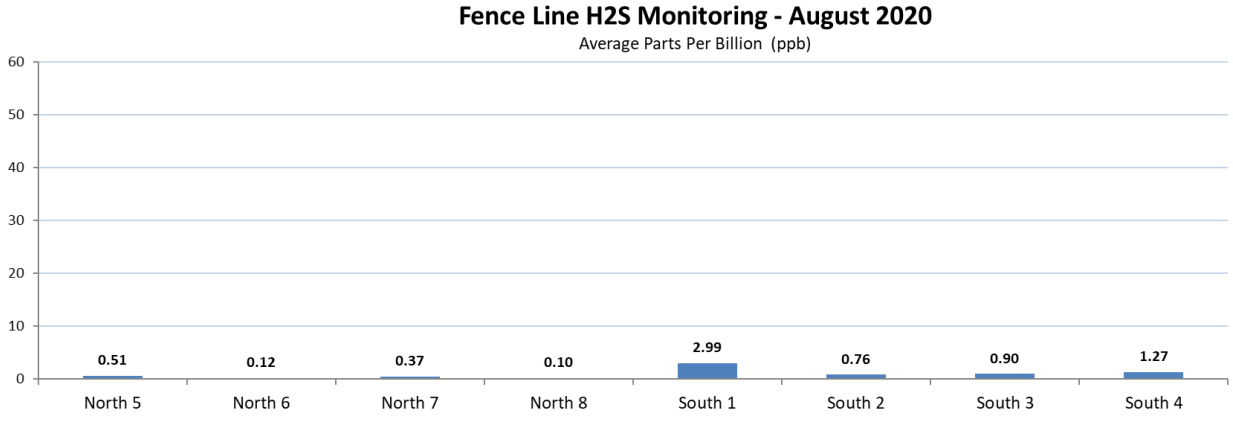
Fence Line Monitoring Data

August 2020

The below chart shows the average monthly H_2S readings taken from 8 locations around the Gold Bar fence line. The readings that we take at these stations are spot readings – instantaneous captures of air samples. The air conditions captured in these samples may only exist for a moment in time.

August 2020:

- We were able to capture 248 spot readings, taken across each of the 8 stations
- The average spot reading in August overall was 0.88 ppb
- The highest spot reading at any location in August was 20.54 ppb



Notes:

- Samples can only be taken if the temperature is above roughly -10° Celsius as the equipment does not capture accurate readings in cold weather
