

## YOUR SUMMER WATER SUPPLY

With the warmest part of the summer season in full swing, you can be confident that there will be plenty of water for you when you turn on the tap – and we’re taking needed steps to make sure it stays that way. Our San Tan district is in one of the fastest-growing regions in the entire country, and secure, reliable water and wastewater services are key to supporting healthy growth and development here in Pinal County.

In the years we’ve been operating your system, first as Interim Manager and now as owner, we’ve added nine million gallons per day of additional water to help avoid summer shortages. These new sources include on-boarding new wells and improving the quality of water produced at existing wells. Bringing water pressure up to standard for all customers is another important improvement.

This year, we’re moving ahead with more work at wells throughout the system and adding stand-by power capability at all the water plants – this will ensure that facilities can keep running in case of power outages.

## CONSERVATION HELPS EVERYONE

While it’s good to know there’s plenty of water this summer, it’s also true – and always will be – that there’s no water to spare in Arizona.

Conservation-minded Arizonans have already had a big impact on reducing overall water usage in our communities, and we thank you! If you’re new to the conservation game, EPCOR has lots of resources to help you save water. Visit [www.epcor.com/learn/efficiency-conservation](http://www.epcor.com/learn/efficiency-conservation) to learn more, or email [conservation@epcor.com](mailto:conservation@epcor.com) for a free conservation kit.

The best part? Conservation is a win-win deal: by saving water, you also save money on your bill.

### LITTLE ACTIONS ADD UP

It might seem that turning the tap off while you brush your teeth or taking a shorter shower doesn’t make that much difference for the water supply.

But statistics show that Arizona is using less water now than we were 50 or even 20 years ago – in part due to the thousands of people making small but significant conservation choices day after day.

## AUGUST IS WATER QUALITY MONTH

Do you know what’s in your water? EPCOR publishes comprehensive water quality reports every year as required by state and federal regulations. Last month we issued our 2020 water quality reports for San Tan water service customers. As expected, the water in your district meets or exceeds all current federal and state regulatory standards. You can find your report by visiting [epcor.com](http://epcor.com) and choosing Arizona from the drop-down location menu.
