

Fence Line Monitoring Data

February 2019

The below chart shows the average monthly H₂S readings taken from 8 locations around the Gold Bar fence line. The readings that we take at these stations are spot readings – instantaneous captures of air samples. The air conditions captured in these samples may only exist for a moment in time.

February 2019:

- We were able to capture 24 spot readings, taken across each of the 8 stations
 - Samples can only be taken if the temperature is above -10° Celsius
- The average spot reading in February overall was 2.25 ppb
- The highest spot reading at any location in February was 15.61 ppb

Notes:

- Samples can only be taken if the temperature is above roughly -10° Celsius as the equipment does not capture accurate readings in cold weather
