

The below chart shows the average monthly H<sub>2</sub>S readings taken from 8 locations around the Gold Bar fence line. The readings that we take at these stations are spot readings – instantaneous captures of air samples. The air conditions captured in these samples may only exist for a moment in time.

**March 2019:**

- We were able to capture 208 spot readings, taken across each of the 8 stations
- The average spot reading in March overall was .523 ppb
- The highest spot reading at any location in March was 17.28 ppb
  - This reading likely occurred because of some planned maintenance to one of the odour scrubbers. This reading was captured at 09:00. By 15:00, a reading at the same station measured 0 ppb.

**Fence Line H<sub>2</sub>S Monitoring – March 2019**

Average Parts Per Billion (ppb)

**Notes:**

- Samples can only be taken if the temperature is above roughly -10° Celsius as the equipment does not capture accurate readings in cold weather
