

Gold Bar WWTP Fence Line Monitoring Data November 2018

The below chart shows the average monthly H₂S readings taken from 8 locations around the Gold Bar WWTP fence line. The readings that we take at these stations are spot readings – instantaneous captures of air samples. The air conditions captured in these samples may only exist for a moment in time.

November 2018:

- We were able to capture 79 spot readings, taken across each of the 8 stations.
- The average spot reading in November across all stations was 4.3 ppb.
- The highest spot reading in November was 101.4 ppb at the South 1 station.

Notes:

- Samples can only be taken if the temperature is above roughly -10° Celsius as the equipment does not capture accurate readings in cold weather
