

# Gold Bar WWTP Fence Line Monitoring Data October 2018

The below chart shows the average monthly H<sub>2</sub>S readings taken from 8 locations around the Gold Bar WWTP fence line. The readings that we take at these stations are spot readings – instantaneous captures of air samples. The air conditions captured in these samples may only exist for a moment in time.

### October 2018:

- We were able to capture 136 spot readings, taken across each of the 8 stations.
- The average spot reading in October across all stations was 1.75 ppb.
- The highest spot reading in October was 42 ppb, captured the at South 1 station.

### Notes:

- Samples can only be taken if the temperature is above roughly -10° Celsius as the equipment does not capture accurate readings in cold weather
