

Gold Bar Fence Line Monitoring Data April 2019

The below chart shows the average monthly H₂S readings taken from 8 locations around the Gold Bar fence line. The readings that we take at these stations are spot readings – instantaneous captures of air samples. The air conditions captured in these samples may only exist for a moment in time.

April 2019:

- We were able to capture 240 spot readings, taken across each of the 8 stations
- The average spot reading in April overall was 1.403 ppb
- The highest spot reading at any location in April was 34.05 ppb
 - This reading likely occurred during a brief period when the fermenter odour scrubber was out of service for scheduled maintenance. The scrubber was back into service later that day and the following day, a spot reading at the same station (Station 6) measured 0 ppb.

Fence Line H₂S Monitoring – April 2019
Average Parts Per Billion (ppb)

Notes:

- Samples can only be taken if the temperature is above roughly -10° Celsius as the equipment does not capture accurate readings in cold weather
