

# DOWNTOWN INTENSIFICATION PROJECT

## Project Overview

The Downtown Intensification Storm Tunnel (DTI) project is part of the Capital City Downtown Plan (CCDP). With the increased density in downtown Edmonton (new condominiums, office towers and the arena district), there is a need to upgrade the stormwater system, including the construction of the new storm tunnel.

## What's happening?

Tunneling work for the storm tunnel on 105 Street has stopped due to unexpected project delays.

The tunneling equipment is underneath 105 Street, approximately 40m south of Jasper Avenue.

In order to continue construction, an access shaft must be built on 105 Street, just north of the alley between the 10405 Jasper Avenue building and the ATCO building.

Once the access shaft is built, tunneling will continue along 105 Street past Jasper Avenue.

EPCOR will do everything possible to manage noise associated with the construction and we will work to ensure that the construction is completed within the requirements of the City of Edmonton Noise Bylaw.

## Schedule

The project is expected to be completed by the end of December 2 man 2018.

## Safety

The construction areas will be fenced and/or marked as restricted areas. We will take every precaution to ensure public safety, and we also need your assistance in keeping children and pets a safe distance from the construction site and the equipment.

**We thank you for your patience and understanding as we continue this necessary work.**

## Who do I contact for more information?

EPCOR Drainage Services
