

## VICTORIA SUBSTATION EXPANSION PROJECT UPDATE

In September 2014, we sent you information regarding the Victoria substation expansion project. We are writing to provide you with updates about the technical details for this project.

The original project newsletter stated that equipment currently located inside the Victoria substation would be replaced. However, the existing equipment will actually remain inside the substation.

As part of this project, we are proposing to add a new building that will house new equipment. The addition of this new equipment will allow for some reconfigurations of the substation equipment to ensure the safe and reliable supply of power in the area, and will also allow for future growth in downtown Edmonton. The new building is needed to house this new equipment.

In October 2014, we will apply to the Alberta Utilities Commission for approval to construct the new building. If approved, we plan to begin work on the new building in the spring of 2015 and be finished in the winter of 2015. Once the new building is completed, we will begin installing the new equipment, which is expected to be complete by the end of 2017.

If you have any concerns or questions about the Victoria substation expansion project, please contact us at your earliest convenience.
