

The below chart shows the average monthly H<sub>2</sub>S readings taken from 8 locations around the Gold Bar fence line. The readings that we take at these stations are spot readings – instantaneous captures of air samples. The air conditions captured in these samples may only exist for a moment in time.

**April 2022:**

- We were able to capture 240 spot readings, taken across each of the 8 stations
- The average spot reading in February overall was 2.269 ppb
- The highest spot reading at any location in April was 40.00 ppb
  - This reading likely occurred due to some foul air that escaped from the tarp covers on the diversion structure.

**Fence Line H<sub>2</sub>S Monitoring**

Average Parts Per Billion (ppb)

**Notes:**

- Samples can only be taken if the temperature is above roughly -10° Celsius as the equipment does not capture accurate readings in cold weather
