

Fence Line Monitoring Data

February 2022

The below chart shows the average monthly H₂S readings taken from 8 locations around the Gold Bar fence line. The readings that we take at these stations are spot readings – instantaneous captures of air samples. The air conditions captured in these samples may only exist for a moment in time.

February 2022:

- We were able to capture 168 spot readings, taken across each of the 8 stations
- The average spot reading in February overall was 1.526 ppb
- The highest spot reading at any location in February was 26.95 ppb
 - This reading likely occurred during a brief period that there were openings on the Fermenter 4 rooftop. The openings were later covered by tarps and air flow to the scrubber was adjusted to remove more foul air from the fermenter.

Fence Line H₂S Monitoring

Average Parts Per Billion (ppb)

Notes:

- Samples can only be taken if the temperature is above roughly -10° Celsius as the equipment does not capture accurate readings in cold weather
