

Gold Bar

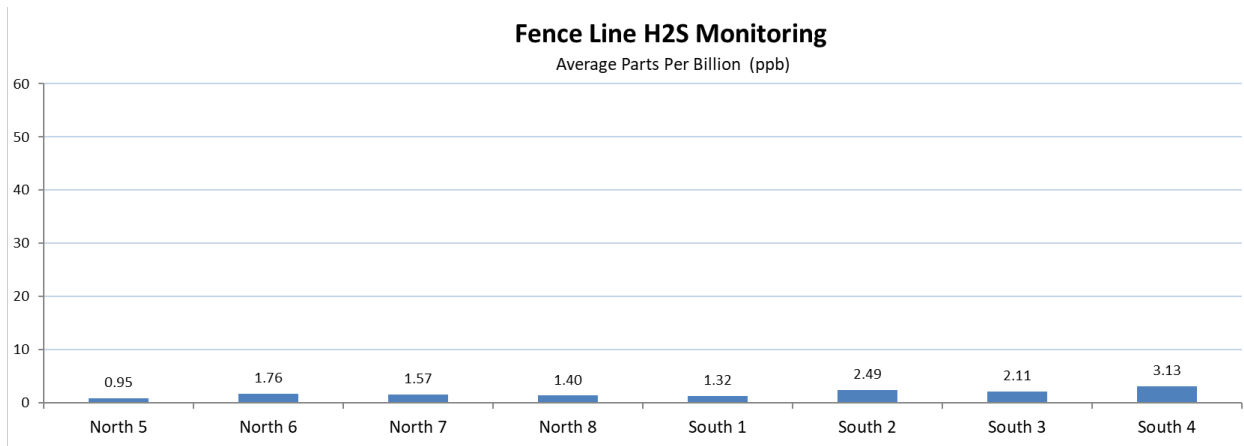

Fence Line Monitoring Data

June 2023

The below chart shows the average monthly H₂S readings taken from 8 locations around the Gold Bar fence line. The readings that we take at these stations are spot readings – instantaneous captures of air samples. The air conditions captured in these samples may only exist for a moment in time.

June 2023:

- We were able to capture 240 spot readings, taken across each of the 8 stations
- The average spot reading in June overall was 1.84 ppb
- The highest spot reading at any location in June was 20.72 ppb

Notes:

- Samples can only be taken if the temperature is above roughly -10° Celsius as the equipment does not capture accurate readings in cold weather
