

The below chart shows the average monthly H₂S readings taken from 8 locations around the Gold Bar fence line. The readings that we take at these stations are spot readings – instantaneous captures of air samples. The air conditions captured in these samples may only exist for a moment in time.

March 2023:

- We were able to capture 216 spot readings, taken across each of the 8 stations
- The average spot reading in March overall was 6.872 ppb
- The highest spot reading at any location in March was 1181 ppb
 - This reading occurred when the screenings bin was being changed out and the overhead door was open.

Notes:

- Samples can only be taken if the temperature is above roughly -10° Celsius as the equipment does not capture accurate readings in cold weather
