

The below chart shows the average monthly H₂S readings taken from 8 locations around the Gold Bar fence line. The readings that we take at these stations are spot readings – instantaneous captures of air samples. The air conditions captured in these samples may only exist for a moment in time.

May 2022:

- We were able to capture 248 spot readings, taken across each of the 8 stations
- The average spot reading in May overall was 2.801 ppb
- The highest spot reading at any location in May was 30.76 ppb
 - This reading likely occurred due to maintenance work, including filter media replacement, on the East Scrubber. The East Scrubber is back online and the odour removal function has been restored.

Notes:

- Samples can only be taken if the temperature is above roughly -10° Celsius as the equipment does not capture accurate readings in cold weather
