

Fence Line Monitoring Data

November 2021

The below chart shows the average monthly H₂S readings taken from 8 locations around the Gold Bar fence line. The readings that we take at these stations are spot readings – instantaneous captures of air samples. The air conditions captured in these samples may only exist for a moment in time.

November 2021:

- We were able to capture 239 spot readings, taken across each of the 8 stations
- The average spot reading in November overall was 2.17 ppb
- The highest spot reading at any location in November was 81.79 ppb
 - This reading is due to temporary cleaning activities by maintenance.

Notes:

- Samples can only be taken if the temperature is above roughly -10° Celsius as the equipment does not capture accurate readings in cold weather
