

Fence Line Monitoring Data

October 2021

The below chart shows the average monthly H<sub>2</sub>S readings taken from 8 locations around the Gold Bar fence line. The readings that we take at these stations are spot readings – instantaneous captures of air samples. The air conditions captured in these samples may only exist for a moment in time.

October 2021:

- We were able to capture 240 spot readings, taken across each of the 8 stations
- The average spot reading in October overall was 1.50 ppb
- The highest spot reading at any location in October was 33.20 ppb
  - This reading is due to ongoing construction at the diversion structure.

Notes:

- Samples can only be taken if the temperature is above roughly -10° Celsius as the equipment does not capture accurate readings in cold weather
