

Fence Line Monitoring Data

September 2023

The below chart shows the average monthly H<sub>2</sub>S readings taken from 8 locations around the Gold Bar fence line. The readings that we take at these stations are spot readings – instantaneous captures of air samples. The air conditions captured in these samples may only exist for a moment in time.

September 2023:

- We were able to capture 240 spot readings, taken across each of the 8 stations
- The average spot reading in September overall was 2.64 ppb
- The highest spot reading at any location in September was 52.95 ppb
  - There were no operational issues identified for this reading and no source was ascertained

Notes:

- Samples can only be taken if the temperature is above roughly -10° Celsius as the equipment does not capture accurate readings in cold weather
