

# SAVE WATER IN THE LAUNDRY ROOM

## 7 WATER-WISE TIPS

- **When shopping** for a new clothes washer, look for energy-efficient models. They use less energy and water than standard models. Visit [www.cee1.org](http://www.cee1.org) for more information.
- **A front-loading** machine uses less water and detergent than a top-loading machine.
- **Position your washing machine** as close as possible to your water heater to reduce heat loss in the connecting pipes.
- **Choose an appropriate wash cycle** for the size of the load. Eight to 10 minutes is enough for most laundry requirements. Use the shortest cycle possible.
- **Wash only full loads** of laundry and don't overload your machine.
- **Use a cold water** rinse to save energy and reduce wrinkles.
- **If your washer** has an adjustable water-level indicator, set it to use only as much water as is necessary.
