

SAVE WATER IN POOLS, SPAS & WATER FEATURES

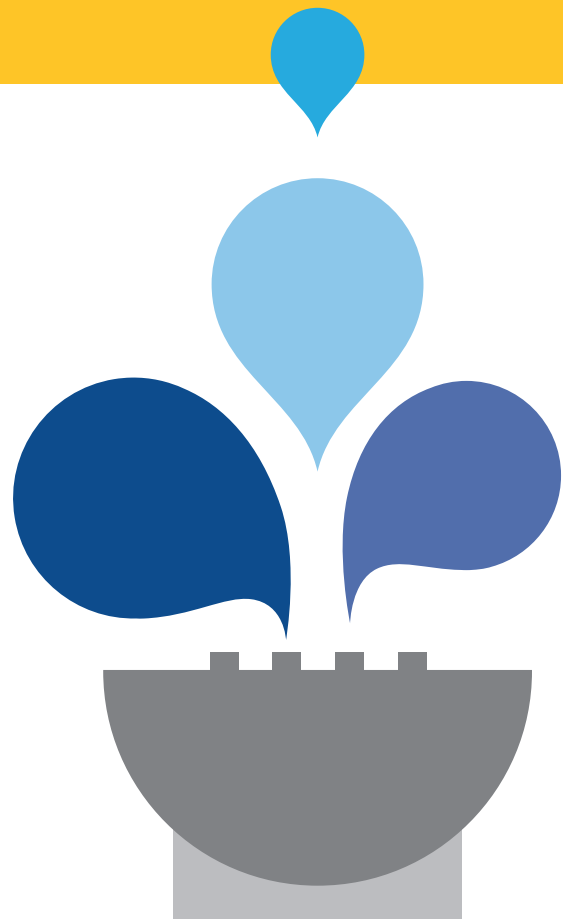

During the hot summer months, water offers a way for many of us to cool down and have fun. If you have a pool, spa or water feature, follow these tips to help make them more efficient.

POOLS & SPAS

- ◊ **Use a cover** to prevent evaporation from your pool or spa.
- ◊ **Replace your spa motor** with a newer, energy-efficient model.

FOUNTAINS & WATER FEATURES

- ◊ **Regularly check** pipes, hoses and connections for leaks.
- ◊ **Adjust the direction and pressure** of spraying water to prevent splashing and avoid evaporation.
- ◊ **Shut off your water features** when it is rainy, windy or very hot to avoid evaporation.
