

Temporary Fluoride Interruption

EPCOR operates two water treatment plants servicing the City of Edmonton and surrounding areas. Starting in early September 2019, and continuing into March 2020, EPCOR is upgrading our E.L. Smith Water Treatment Plant to replace four bulk fluoride storage tanks while continuing to deliver great tasting, quality water to your home.

During this time, we will be temporarily stopping the addition of fluoride to the water serviced by the E.L. Smith Water Treatment Plant while we complete these upgrades. Areas surrounding the Rossdale Water Treatment Plant will continue to receive fluoridated water.

What does this mean for me?

Alberta Health Services recommends residents in this area continue to use a fluoridated toothpaste and schedule regular dental checkups.
