# WATER QUALITY REPORT

[epcor.com](http://epcor.com)

## Safety. Quality. Community. You'll hear these words spoken often around EPCOR.

### Water. It's life.

At EPCOR, we're committed to providing you safe, quality, reliable drinking water every day. It's our mission, and it's an honor. Water fuels our daily routine, quenches our thirst and breathes life into our meals.

But we can't take it for granted. Our water system needs a steward, one who's there behind the scenes 24 hours a day, 7 days a week to manage, maintain and invest in it.

EPCOR takes this responsibility seriously. From daily water quality checks that ensure safety and quality to investing in your water system, we're ensuring that water will be available for years to come, whether your water source is deep underground or from rivers and lakes.

In addition to monitoring the water that comes out of your tap, we're also maintaining and improving the miles of pipelines, water mains, wells and hydrants that make up your water system. We're ensuring that water isn't wasted, and that it's a resource that will be there for the long term.

Because every drop matters.

Sincerely,

**Joe Gysel**

President,  
EPCOR USA, Inc.

## YOU WANT TO KNOW WHAT'S IN THE WATER YOU'RE DRINKING

As your water service provider, we're committed to ensuring the quality and safety of that water. That's why you are receiving this annual water quality report from us. We hope it will help you understand your community's water a little better and what we're doing to protect it.

## WHAT WILL I FIND IN THIS REPORT?

This report complies with state and U.S. Environmental Protection Agency (EPA) drinking water regulations.

In it you'll find information on:

- Where your water comes from
- Protecting your water
- What's in your water

Information in this report is compiled, in part, from analytical data generated by laboratories certified in drinking water analysis.

## READ THIS REPORT – AND SHARE IT!

Reading this report and understanding your community's water is the first step. But it's also important to share this information with those who might not receive it directly. If you're a landlord, business, school or hospital, please share this report with water users in your community.

## QUESTIONS?

**EPCOR Customer Care:**

**1-800-383-0834**

**mywater@epcor.com**

Este informe contiene información muy importante sobre su agua potable. Tradúzcalo o hable con alguien que lo entienda bien.

# ABOUT YOUR WATER

## ANTHEM

### ABOUT YOUR DISTRICT

- EPCOR provides service to approximately 9,000 service connections in the Anthem district.

### WHERE YOUR WATER COMES FROM

- The Colorado River via the Central Arizona Project (CAP), City of Phoenix and groundwater pumped from the Salt River Valley groundwater basin

#### About your CAP water

- Your water is primarily Colorado River water delivered from Lake Havasu via the CAP Canal to Lake Pleasant.
- Your water is a mix of Colorado River and Lake Pleasant water which receives water from the Agua Fria River. Water is delivered to Anthem via an eight-mile long pipeline from the CAP Canal to the Anthem Water Treatment Plant. The Anthem Water Treatment Plant is a microfiltration plant designed to meet current and future water quality requirements.

#### City of Phoenix

The interconnect with the City of Phoenix is supplied by the Union Hills Water Treatment Plant and/or the Lake Pleasant Water Treatment Plant, both of which also receive and treat water from the CAP Canal.

#### Additional Information About The Groundwater In Your Area

- Two wells supply groundwater pumped from the Salt River Valley groundwater basin.
- Sources of groundwater recharge include natural recharge from stream flows and along mountain fronts, incidental recharge from agricultural and urban uses, and intentional recharge at constructed recharge facilities.

#### How We Protect Groundwater Together

Both groundwater and the associated pumping and delivery facilities are part of a complex system that needs not just monitoring, but also maintenance. From pipelines to water mains, wells to hydrants, we're ensuring that the groundwater supply is protected and accessible.

### How You Can Help

Properly dispose of hazardous household chemicals on hazardous material collection days and limit your pesticide and fertilizer use. For information on household hazardous material collection days in your area, contact the **Arizona Department of Environmental Quality** at **602-771-2300** or **Earth911.com**.

### Recognition

In 2014, EPCOR'S Anthem Water Treatment Plant received the "Director's Award of Recognition" from the national Partnership for Safe Water. When awarded, Anthem was one of the first membrane treatment facilities in the U.S. and only the third facility in Arizona to be recognized by the Partnership for Safe Water with this prestigious award.

For more information on the **American Water Works Association** and the **Partnership for Safe Water** please visit **www.awwa.org**.

### NOTICE OF SOURCE WATER ASSESSMENT

In 2004, the Arizona Department of Environmental Quality (ADEQ) completed a source water assessment for the two wells and one surface water intake used by EPCOR-Anthem. The assessment reviewed the adjacent land uses that may pose a potential risk to the sources. These risks include, but are not limited to, gas stations, landfills, dry cleaners, agriculture fields, wastewater treatment plants and mining activities. Once ADEQ identified the adjacent land uses, they were ranked as to their potential to affect the water sources. The results of the assessment were that the two wells had no adjacent land uses in the vicinity, and the surface water intake had one adjacent land use that posed a high risk to the source.

The complete assessment is available for inspection at the Arizona Department of Environmental Quality, 1110 W. Washington, Phoenix, AZ 85007, between the hours of 8 a.m. and 5 p.m. For more information please contact **ADEQ** at **602-771-2300**.

### GETTING INVOLVED

Consulting with the community is important to us. If you have a question, concern or suggestion about your local water system, please contact our Customer Care team at **1-800-383-0834**.

# WHAT YOU CAN EXPECT TO FIND IN YOUR WATER

## SOURCES OF DRINKING WATER

The sources of drinking water—both tap water and bottled water—include rivers, lakes, streams, ponds, reservoirs, springs and wells. As water travels over land surfaces or through the ground, it can acquire naturally occurring minerals. In some cases it can also acquire radioactive material and substances resulting from the presence of animals or from human activity.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of these contaminants does not necessarily indicate that the water poses a health risk.

More information about contaminants and potential health effects can be obtained by calling the **EPA's Safe Drinking Water Information Hotline** at **1-800-426-4791**.

## SUBSTANCES THAT MAY BE PRESENT IN SOURCE WATER

**Microbial Contaminants**, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations or wildlife.

**Inorganic Contaminants**, such as salts and metals, which can be naturally occurring or may result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining or farming.

**Pesticides and Herbicides**, may come from a variety of sources, such as agriculture, urban stormwater runoff and residential uses.

**Organic Chemical Contaminants**, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and may also come from gas stations, urban stormwater runoff and septic systems.

**Radioactive Contaminants**, which can be naturally occurring or may be the result of oil and gas production and mining activities.

## DID YOU KNOW?

- **One-Part-Per-Million** (mg/L or ppm) is equivalent to one inch in 16 miles.
- **One-Part-Per-Billion** (ug/L or ppb) is equivalent to a single 4-inch hamburger in a chain of hamburgers long enough to circle the earth at the equator 2.5 times.
- **One-Part-Per-Trillion** (ng/L or ppt) is equal to a single drop of water being diluted into 20 Olympic-size swimming pools.

## ENSURING YOUR WATER IS SAFE

To ensure that tap water is safe to drink, the EPA prescribes regulations limiting the amount of certain contaminants in water provided by public water systems. To ensure bottled water is safe to drink, U.S. Food and Drug Administration regulations establish limits for contaminants in bottled water.

# WHAT YOU CAN EXPECT TO FIND IN YOUR WATER

## SPECIAL HEALTH INFORMATION

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly and infants may be particularly at risk from infections. These people should seek advice about drinking water from their healthcare providers. EPA/CDC (Centers for Disease Control and Prevention) guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbial contaminants are available from the **EPA's Safe Drinking Water Information Hotline** at **1-800-426-4791**.

### Lead

EPCOR monitored the water for lead and copper in 2017 at 30 residences throughout the community and met the federal lead and copper standards. The 30 houses sampled were representative of the types of houses throughout the system. If your house was sampled you would have received the analysis results. If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. EPCOR is responsible for providing highquality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods and steps you can take to minimize exposure is available from the **Safe Drinking Water Information Hotline** or at **www.epa.gov/safewater/lead**.

### Seasonal changes in hardness and taste

Because your water supply contains both surface water and groundwater, you may experience seasonal changes in the hardness and the taste of your water. The hardness and taste difference between surface water and groundwater is normal and completely safe.

## HOME WATER TREATMENT UNITS

Failure to perform maintenance on your home water treatment unit can result in poor water quality. If you installed a home water treatment system such as a water softener or reverse osmosis system, please remember to follow the manufacturer's instructions on operation and maintenance. For more information, contact the manufacturer of your treatment system for maintenance instructions or assistance. Additional information about home water treatment systems is available from the **Water Quality Association** at **630-505-0160** or by visiting **wqa.org**.

## DID YOU KNOW?

Tap water costs a lot less than what you pay for other beverages. **A gallon of water costs you about 1 penny.** Compare that to the cost of a gallon of these beverages\*:

- ◆ Milk = \$3.29/gallon
- ◆ Orange Juice = \$2.55/gallon
- ◆ Beer = \$15.00/gallon
- ◆ Bottled Water = \$1.21/gallon
- ◆ Wine = \$25/gallon

\* Costs for milk, orange juice and bottled water obtained from Bureau of Labor Statistics and Beverage Marketing Association reports. Other costs determined by calculating average supermarket pricing for bottles of soda, wine and beer and converting to a gallon.

# FREQUENTLY ASKED QUESTIONS

## WHAT IS THE WHITE OR COLORED DEPOSIT ON MY DISHES OR FAUCETS?

In most cases, the deposits or sediments left behind after water evaporates are calcium carbonate. The amount of calcium in the water is referred to as hardness. Cleaning with white vinegar can help to dissolve and remove deposits. Using a commercial conditioner, liquid detergents or the “air-dry” option in dishwashers can help to decrease the calcium carbonate found on dishes.

## ARE THE DEPOSITS OR HARD WATER HARMFUL?

Hardness and/or the deposits left by hard water don't pose a health concern and may have health benefits. We don't treat drinking water for water hardness that can result in hard water deposits.

## WHAT IS THE LEVEL OF HARDNESS IN MY WATER?

The hardness in your water is approximately 17 grains per gallon (gpg).

### Degree of water hardness range (gpg)

Soft	Less than 1
Slightly Hard	1 to 3.4
Moderately Hard	3.5 to 6.9
Hard	7 to 10.4
Very Hard	Greater than 10.5

## WHY IS MY WATER CLOUDY OR MILKY IN APPEARANCE WHEN IT COMES OUT OF THE TAP?

Water that appears cloudy or milky is typically caused by trapped air (very small air bubbles) in the water. If this occurs, simply let the water stand for a few minutes—the air will dissipate leaving a clear glass of water.

The quality of your water depends on the source water itself as well as factors such as the geology and biology of the area where the water came from. For some elements that are known to have an effect on the aesthetics of the water quality parameters, the EPA has established guidance levels known as secondary maximum contaminant level standards (SMCLs). When levels of these contaminants are found to be above the SMCLs, they may impact the aesthetic quality of the water (e.g., color, taste and odor). Although aesthetic water qualities may vary, your water meets all state and federal regulatory standards and is safe to use for all drinking water purposes. Secondary contaminants include, but are not limited to, manganese, iron and total dissolved solids (TDS).

## WHY IS CHLORINE ADDED TO MY DRINKING WATER?

Chlorine is added to your water for your protection and is used as a disinfectant to ensure that harmful organisms, such as bacteria and viruses, are destroyed in the treatment process.

## ARE THERE OTHER WAYS TO REMOVE THE CHLORINE TASTE OR SMELL FROM MY WATER?

To remove the taste of chlorine from your water, try these tips:

- ▶ Place water in a glass container in the refrigerator overnight, uncovered. This will let the chlorine dissipate.
- ▶ Bring your water to a rolling boil for five minutes and let it stand to cool.
- ▶ Add a slice of lemon or a few drops of lemon juice to your glass of drinking water.

## WILL MY HOME TREATMENT DEVICE REMOVE CHLORINE?

Some home treatment devices can remove chlorine. Once chlorine is removed, the water should be treated like any other beverage product and used as quickly as possible. We recommend that you follow the manufacturer's instructions for maintaining the device to ensure water quality.

# DEFINITION OF TERMS

**AL (Action Level):** The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

**GPG (grains per gallon):** Used to describe the dissolved hardness minerals contained in water and is a unit of weight that equals 1/7,000 of a pound.

**HAA5 (Haloacetic Acids):** Consist of Monochloroacetic Acid, Dichloroacetic Acid, Trichloroacetic Acid, Bromoacetic Acid and Dibromoacetic Acid.

**MCL (Maximum Contaminant Level):** The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

**MCLG (Maximum Contaminant Level Goal):** The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

**MNR:** Monitored, not regulated.

**MRDL (Maximum Residual Disinfectant Level):** The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

**MRDLG (Maximum Residual Disinfectant Level Goal):** The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

**NA:** Not Applicable.

**ND:** None Detected.

**NTU:** Nephelometric turbidity units.

**ppb (Parts per Billion):** One part substance per billion parts water (or micrograms per liter).

**pCi/L (Picocuries per Liter):** Measurement of the natural rate of disintegration of radioactive contaminants in water (also beta particles).

**ppm (Parts per Million):** One part substance per million parts water (or milligrams per liter).

**ppt (Parts per Trillion):** One part substance per trillion parts water (or nanograms per liter).

**SMCL (Secondary Maximum Contaminant Level):** Non-enforceable guidelines regulating contaminants that may cause cosmetic or aesthetic effects in drinking water.

**Total Dissolved Solids:** An overall indicator of the amount of minerals in water.

**TT (Treatment Technique):** A required process intended to reduce the level of a contaminant in drinking water.

**TTHM (Total Trihalomethanes):** Consist of Chloroform, Bromoform, Bromodichloromethane and Dibromochloromethane.

**UCMR (Unregulated Contaminant Monitoring Rule):** Unregulated substances are measured, but maximum contaminant levels have not been established by the government.

# WHAT'S IN YOUR WATER

## HOW TO READ YOUR WATER QUALITY TABLE

Below, you'll see an analysis of your drinking water. Here's an example of how to read these tables:

## YOUR WATER QUALITY TABLE

The data shown in the tables below are results from commercial laboratories certified in drinking water analysis by the Arizona Department of Health Services.

The table shows what substances were detected in your drinking water during 2018 or the last required sampling period within the last five years.

### Regulated Substances Measured in the Water Leaving the Treatment Facility

Substance (units)	Year Sampled	MCLG	MCL	Highest Amount Detected	Range of Detections	Compliance Achieved	Typical Sources
Arsenic (ppb)	2018	0	10	2.5	1.8 - 2.5	YES	Erosion of natural deposits
Barium (ppm)	2018	2	2	0.12	0.11 - 0.12	YES	Erosion of natural deposits
Fluoride (ppm)	2018	4.0	4.0	0.39	0.38 - 0.39	YES	Erosion of natural deposits
Nitrate (ppm)	2018	10	10	0.28	ND - 0.28	YES	Runoff from fertilizer use; leaching from septic tanks, sewage; erosion of natural deposits
Selenium (ppb)	2018	50	50	3.4	ND - 3.4	YES	Erosion of natural deposits
Sodium (ppm)	2018	NA	MNR	100	95 - 100	YES	Erosion of natural deposits
Gross alpha excluding radon and uranium (pCi/L)	2014	0	15	3.8	3.7 - 3.8	YES	Erosion of natural deposits; Certain minerals contain/emit this radiation form
Combined Radium 226/228	2014	0	5	0.4	0.4	YES	Erosion of natural deposits; Certain minerals contain/emit this radiation form

# WHAT'S IN YOUR WATER

## Detected Substances at Points Where Water Leaves the City of Phoenix Plant

Substance (units)	Year Sampled	MCLG	MCL	Highest Running Annual Average	Sample Results Range	Major Sources in Drinking Water
Arsenic (ppb)	2018	0	10	7	ND - 8	Erosion of natural deposits; Runoff from orchards; Runoff from glass and electronics production wastes
Barium (ppm)	2018	2	2	NA	0.007 - 0.1	Discharge of drilling wastes; Discharge from metal refineries; Erosion of natural deposits
Benzo(a)pyrene (PHAs) (ppb)	2018	0	0.2	NA	0.04	Leaching from linings of water storage tanks and distribution lines
Chromium (ppb)	2018	100	100	46	4 - 46	Discharge from steel and pulp mills; Erosion of natural deposits
Fluoride (ppm)	2018	4	4	NA	0.5 - 0.6	Erosion of natural deposits; Water additive, which promotes strong teeth; Discharge from fertilizer and aluminium factories
Nitrate (as N) (ppm)	2018	10	10	NA	ND - 5	Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits
Thallium (ppb)	2018	0.5	2	NA	0.06	Leaching from ore-processing sites; Discharge from electronics, glass and drug factories
Xylenes (ppm)	2018	10	10	NA	ND - 0.001	Discharge from petroleum factories; discharge from chemical factories

## Detected Substances at Points Where Water Leaves the City of Phoenix Plant

Substance (units)	Year Sampled	MCLG	MCL	Sample Results Range	Major Sources in Drinking Water
Alpha Emitters (pCi/L)	2018	0	15	ND - 3	Erosion of natural deposits
Combined Radium (pCi/L)	2018	0	5	ND - 0.5	Erosion of natural deposits
Uranium	2018	0	30	2 - 5	Erosion of natural deposits

# WHAT'S IN YOUR WATER

## Turbidity<sup>1</sup> – A Measure of the Clarity of the Water at the Treatment Facility

Plant	Year Sampled	TT	Highest Single Measurement	Compliance Achieved	Typical Sources
Highest single turbidity measurement	2018	1 NTU	0.08 <sup>1</sup>	YES	Soil run-off
% Monthly samples < 0.3 NTU (%)	2018	95% of samples < 0.3 NTU	100%	YES	Soil run-off

## Turbidity<sup>1</sup> Monitoring Where Water Leaves the City of Phoenix Plant

Substance	Year Sampled	Treatment Technique applied instead of MCL	Highest Measurement	Lowest Monthly Percentage	Major Sources in Drinking Water
Turbidity	2018	No value can exceed 1 NTU and at least 95% of monthly measurements must be less than or equal to 0.3 NTU	0.2 NTU	100% of monthly measurements were less than or equal to 0.3 NTU	Soil run-off

## Regulated Substances Measured from the Water in the Distribution System

Substance (units)	Year Sampled	MCLG/ MRDLG	MCL/ MRDL	Highest Running Annual Average	Range of Detections	Compliance Achieved	Typical Sources
TTHMs (ppb)	2018	NA <sup>2</sup>	80	57.2	33.8 - 64.2	YES	By-product of drinking water disinfection
HAA5 (ppb)	2018	NA <sup>2</sup>	60	20.3	13.2 - 23.6	YES	By-product of drinking water disinfection
Chlorine residual (ppm)	2018	4	4.0	0.66	0.61 - 0.66	YES	Water additive used to control microbes

## Tap Water Samples: Lead and Copper Results

Substance (units)	Year Sampled	MCLG	Action Level	Number of Samples	90th Percentile	Number of Samples Above Action Level	Compliance Achieved	Typical Sources
Copper (ppm)	2017	1.3	1.3	30	0.79	0	YES	Corrosion of household plumbing systems; erosion of natural deposits
Lead (ppb)	2017	0	15	30	ND	0	YES	Corrosion of household plumbing systems; erosion of natural deposits

# WHAT'S IN YOUR WATER

## Aesthetic Water Quality Analysis City of Phoenix Plant

Substance (units)	Year Sampled	Secondary Guideline	Sample Results Range
pH (NA)	2018	6.5 - 8.5	7.5 - 8.0
Sodium (ppm)	2018	NA	26 - 243

## Disinfectant and Disinfection By-product Monitoring City of Phoenix Plant

Substance (units)	Year Sampled	MCLG	MCL	Sample Results Range	Running Annual Average (RRA)	Major Sources in Drinking Water
Total Organic Carbon Removal Ratio	2018	NA	TT = 1 or Greater Running Annual Average	1.0 - 3.8	1.4 (lowest RRA)	Naturally present in the environment
Chlorine Dioxide (ppb)	2018	MRDLG = 800	MRDL = 800	ND - 380	NA	Water additive as an oxidant
Chlorite (ppm)	2018	0.8	1	ND - 0.5	NA	By-product of drinking water treatment

## Unregulated Contaminants\* City of Phoenix Plant

Substance (units)	Year Sampled	MCL	Lowest Detected Level	Highest Detected Level	Average	Major Sources in Drinking Water
Manganese (ppb)	2018	NA	0.6	3.2	1.9	Naturally occurring element

\* UCMR4 monitoring occurring 2018-2020

# WHAT'S IN YOUR WATER

## Unregulated Substances Measured in the Water Leaving the Treatment Facility

Substance (units)	Year Sampled	Range of Detections	Typical Sources
Calcium (ppm)	2015	71	Erosion of natural deposits
Hardness (grains/gallon)	2015	17.1	Natural Calcium/Magnesium content
Magnesium (ppm)	2015	27	Erosion of natural deposits
pH (standard units)	2015	7.5 - 8.4	pH is a measure of acid/base properties
Sulfate	2015	249 - 254	Erosion of natural deposits

## Unregulated Contaminant Monitoring Rule Substances Measured at the Treatment Facility and in the Distribution System

Substance (units)	Year Sampled	Range of Detections	Typical Sources
Chlorate (ppb)	2014	23 - 110	By-product of drinking water disinfection
Chromium VI (ppb)	2014	ND - 1.4	Erosion of natural deposits
Molybdenum (ppb)	2014	ND - 4.6	Erosion of natural deposits
Strontium (ppm)	2014	0.7 - 1.1	Erosion of natural deposits
Vanadium (ppb)	2014	1.5 - 12.2	Erosion of natural deposits
1,4 Dioxane (ppb)	2014	ND - 0.08	Discharge from industrial chemical factories

<sup>1</sup>**Turbidity** has no health effects. However, turbidity can interfere with disinfection and provide a medium for microbial growth. Turbidity may indicate the presence of disease-causing organisms. These organisms include bacteria, viruses and parasites that can cause symptoms such as nausea, cramps, diarrhea and associated headaches.

<sup>2</sup>**TTHM/HAA5:** Although there is no collective MCLG for this contaminant group, there are individual MCLGs for some of the individual contaminants: Trihalomethanes: bromodichloromethane (0.0 mg/L); bromoform (0.0 mg/L); chloroform (0.07 mg/L); dibromochloromethane (0.06 mg/L). Haloacetic acids: dichloroacetic acid (0.0 mg/L); trichloroacetic acid (0.3 mg/L). Monochloroacetic acid, bromoacetic acid and dibromoacetic acid are regulated with this group but have no MCLGs.

## ADDITIONAL MONITORING

In addition to the parameters listed in this table, other parameters were monitored for, including regulated pesticides, herbicides, petroleum by-products and metals. None of those parameters were detected in the water. If you have any questions about this report or your drinking water, please call our **Customer Care** team at **1-800-383-0834**.

EPCOR encourages feedback related to the quality of water that is provided to you. Please feel free to submit comments to us directly at [mywater@epcor.com](mailto:mywater@epcor.com). You may also provide feedback to the Arizona Corporation Commission (ACC).
