# WATER QUALITY REPORT

[epcor.com](http://epcor.com)

PWS ID NM3500326

**EPCOR**

## Safety. Quality. Community. You'll hear these words spoken often around EPCOR.

### **Water. It's life.**

At EPCOR, we're committed to providing you safe, quality, reliable drinking water every day. It's our mission, and it's an honor. Water fuels our daily routine, quenches our thirst and breathes life into our meals.

But we can't take it for granted. Our water system needs a steward, one who's there behind the scenes 24 hours a day, 7 days a week to manage, maintain and invest in it.

EPCOR takes this responsibility seriously. From daily water quality checks that ensure safety and quality to investing in your water system, we're ensuring that water will be available for years to come, whether your water source is deep underground or from rivers and lakes.

In addition to monitoring the water that comes out of your tap, we're also maintaining and improving the miles of pipelines, water mains, wells and hydrants that make up your water system. We're ensuring that water isn't wasted, and that it's a resource that will be there for the long term.

Because every drop matters.

Sincerely,

**Joe Gysel**

President, EPCOR USA, Inc.

### **QUESTIONS?**

**EPCOR Customer Care:**

**1-800-383-0834 • [mywater@epcor.com](mailto:mywater@epcor.com)**

Este informe contiene información muy importante sobre su agua potable. Tradúzcalo o hable con alguien que lo entienda bien.

## **YOU WANT TO KNOW WHAT'S IN THE WATER YOU'RE DRINKING**

As your water service provider, we're committed to ensuring the quality and safety of that water. That's why you are receiving this annual water quality report from us. We hope it will help you understand your community's water a little better and what we're doing to protect it.

### **WHAT WILL I FIND IN THIS REPORT?**

This report complies with state and U.S. Environmental Protection Agency (EPA) drinking water regulations.

In it you'll find information on:

- Where your water comes from
- Protecting your water
- What's in your water

Information in this report is compiled, in part, from analytical data generated by laboratories certified in drinking water analysis.

### **READ THIS REPORT – AND SHARE IT!**

Reading this report and understanding your community's water is the first step. But it's also important to share this information with those who might not receive it directly. If you're a landlord, business, school or hospital, please share this report with water users in your community.

# ABOUT YOUR WATER

## EDGEWOOD & THUNDER MOUNTAIN

### ABOUT YOUR DISTRICT

- EPCOR provides water service to 2,680 service connections in the Edgewood and Thunder Mountain service areas.
- The Edgewood and Thunder Mountain districts serviced by EPCOR encompass approximately 42.5 square miles within Santa Fe County and a small portion of Torrance County.

### WHERE YOUR WATER COMES FROM

- The Edgewood and Thunder Mountain districts are served entirely by groundwater pumped from the Estancia Basin.

### Additional Information About The Groundwater In Your Area

The Estancia Basin in the Edgewood area has been designated as a critical management area by the Office of the State Engineer (OSE) in New Mexico. The OSE regulates the use of this aquifer and limits the amount of rights available for water production.

### How We Protect Groundwater Together

Both groundwater and the associated pumping and delivery facilities are part of a complex system that needs not just monitoring, but also maintenance. From pipelines to water mains, wells to hydrants, we're ensuring that the groundwater supply is protected and accessible.

### How You Can Help

Properly dispose of hazardous household chemicals on hazardous material collection days and limit your pesticide and fertilizer use. For information on household hazardous material collection days in your area, contact the **New Mexico Recycling Coalition (NMRC)** at **575-224-2630** or **Earth911.com**.

### NOTICE OF SOURCE WATER ASSESSMENT

The Susceptibility Analysis of the EPCOR Water – Edgewood and Thunder Mountain system reveal the water system is well maintained and operated, and sources of drinking water are generally protected from potential sources of contamination based on well construction, hydrogeological settings and system operations and management. The susceptibility ranking of the entire water system is high. Please call 1-800-383-0834 for more information on this assessment. Copies of the Source Water Assessment are available at the **New Mexico Environment Department – Drinking Water Bureau (NMED-DWB): 1-877-654-8720**. Please provide your name, address and telephone number. Note: The NMED-DWB may charge a nominal fee for paper copies.

### GETTING INVOLVED

Consulting with the community is important to us. If you have a question, concern or suggestion about your local water system, please contact our Customer Care team at **1-800-383-0834**.

# WHAT YOU CAN EXPECT TO FIND IN YOUR WATER

## SOURCES OF DRINKING WATER

The sources of drinking water—both tap water and bottled water—include rivers, lakes, streams, ponds, reservoirs, springs and wells. As water travels over land surfaces or through the ground, it can acquire naturally occurring minerals. In some cases it can also acquire radioactive material and substances resulting from the presence of animals or from human activity.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of these contaminants does not necessarily indicate that the water poses a health risk.

More information about contaminants and potential health effects can be obtained by calling the **EPA's Safe Drinking Water Information Hotline** at **1-800-426-4791**.

## DID YOU KNOW?

- **One-Part-Per-Million** (mg/L or ppm) is equivalent to one inch in 16 miles.
- **One-Part-Per-Billion** (ug/L or ppb) is equivalent to a single 4-inch hamburger in a chain of hamburgers long enough to circle the earth at the equator 2.5 times.
- **One-Part-Per-Trillion** (ng/L or ppt) is equal to a single drop of water being diluted into 20 Olympic-size swimming pools.

## ENSURING YOUR WATER IS SAFE

To ensure that tap water is safe to drink, the EPA prescribes regulations limiting the amount of certain contaminants in water provided by public water systems. To ensure bottled water is safe to drink, U.S. Food and Drug Administration regulations establish limits for contaminants in bottled water.

## SUBSTANCES THAT MAY BE PRESENT IN SOURCE WATER

**Microbial Contaminants**, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations or wildlife.

**Inorganic Contaminants**, such as salts and metals, which can be naturally occurring or may result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining or farming.

**Pesticides and Herbicides**, may come from a variety of sources, such as agriculture, urban stormwater runoff and residential uses.

**Organic Chemical Contaminants**, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and may also come from gas stations, urban stormwater runoff and septic systems.

**Radioactive Contaminants**, which can be naturally occurring or may be the result of oil and gas production and mining activities.

# WHAT YOU CAN EXPECT TO FIND IN YOUR WATER

## SPECIAL HEALTH INFORMATION

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly and infants may be particularly at risk from infections. These people should seek advice about drinking water from their healthcare providers. EPA/CDC (Centers for Disease Control and Prevention) guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbial contaminants are available from the **EPA's Safe Drinking Water Information Hotline** at **1-800-426-4791**.

## Lead

EPCOR monitored the water for lead and copper in 2017 at 20 residences throughout the community and met the federal lead and copper standards. The 20 houses sampled were representative of the types of houses throughout the system. If your house was sampled you would have received the analysis results. If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. EPCOR is responsible for providing high-quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods and steps you can take to minimize exposure is available from the **Safe Drinking Water Information Hotline** or at **[www.epa.gov/safewater/lead](http://www.epa.gov/safewater/lead)**.

## DID YOU KNOW?

Tap water costs a lot less than what you pay for other beverages.

**A gallon of water costs you about 1 penny.**

Compare that to the cost of a gallon of these beverages\*:

- Milk = \$3.29/gallon
- Orange Juice = \$2.55/gallon
- Beer = \$15.00/gallon
- Bottled Water = \$1.21/gallon
- Wine = \$25/gallon

\* Costs for milk, orange juice and bottled water obtained from Bureau of Labor Statistics and Beverage Marketing Association reports. Other costs determined by calculating average supermarket pricing for bottles of soda, wine and beer and converting to a gallon.

## HOME WATER TREATMENT UNITS

Failure to perform maintenance on your home water treatment unit can result in poor water quality. If you installed a home water treatment system such as a water softener or reverse osmosis system, please remember to follow the manufacturer's instructions on operation and maintenance. For more information, contact the manufacturer of your treatment system for maintenance instructions or assistance. Additional information about home water treatment systems is available from the **Water Quality Association** at **630-505-0160** or by visiting **[wqa.org](http://wqa.org)**.

# FREQUENTLY ASKED QUESTIONS

## WHAT IS THE WHITE OR COLORED DEPOSIT ON MY DISHES OR FAUCETS?

In most cases, the deposits or sediments left behind after water evaporates are calcium carbonate. The amount of calcium in the water is referred to as hardness. Cleaning with white vinegar can help to dissolve and remove deposits. Using a commercial conditioner, liquid detergents or the “air-dry” option in dishwashers can help to decrease the calcium carbonate found on dishes.

## ARE THE DEPOSITS OR HARD WATER HARMFUL?

Hardness and/or the deposits left by hard water don't pose a health concern and may have health benefits. We don't treat drinking water for water hardness that can result in hard water deposits.

## WHAT IS THE LEVEL OF HARDNESS IN MY WATER?

The hardness in your water ranges from 35 to 44 grains per gallon (gpg).

### Degree of water hardness range (gpg)

Soft	Less than 1
Slightly Hard	1 to 3.4
Moderately Hard	3.5 to 6.9
Hard	7 to 10.4
Very Hard	Greater than 10.5

## WHY IS MY WATER CLOUDY OR MILKY IN APPEARANCE WHEN IT COMES OUT OF THE TAP?

Water that appears cloudy or milky is typically caused by trapped air (very small air bubbles) in the water. If this occurs, simply let the water stand for a few minutes—the air will dissipate leaving a clear glass of water.

The quality of your water depends on the source water itself as well as factors such as the geology and biology of the area where the water came from. For some elements that are known to have an effect on the aesthetics of the water quality parameters, the EPA has established guidance levels known as secondary maximum contaminant level standards (SMCLs). When levels of these contaminants are found to be above the SMCLs, they may impact the aesthetic quality of the water (e.g., color, taste and odor). Although aesthetic water qualities may vary, your water meets all state and federal regulatory standards and is safe to use for all drinking water purposes. Secondary contaminants include, but are not limited to, manganese, iron and total dissolved solids (TDS).

## WHY IS CHLORINE ADDED TO MY DRINKING WATER?

Chlorine is added to your water for your protection and is used as a disinfectant to ensure that harmful organisms, such as bacteria and viruses, are destroyed in the treatment process.

## ARE THERE OTHER WAYS TO REMOVE THE CHLORINE TASTE OR SMELL FROM MY WATER?

To remove the taste of chlorine from your water, try these tips:

- ▶ Place water in a glass container in the refrigerator overnight, uncovered. This will let the chlorine dissipate.
- ▶ Bring your water to a rolling boil for five minutes and let it stand to cool.
- ▶ Add a slice of lemon or a few drops of lemon juice to your glass of drinking water.

## WILL MY HOME TREATMENT DEVICE REMOVE CHLORINE?

Some home treatment devices can remove chlorine. Once chlorine is removed, the water should be treated like any other beverage product and used as quickly as possible. We recommend that you follow the manufacturer's instructions for maintaining the device to ensure water quality.

# DEFINITION OF TERMS

**AL (Action Level):** The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

**GPG (grains per gallon):** Used to describe the dissolved hardness minerals contained in water and is a unit of weight that equals 1/7,000 of a pound.

**HAA5 (Haloacetic Acids):** Consist of Monochloroacetic Acid, Dichloroacetic Acid, Trichloroacetic Acid, Bromoacetic Acid and Dibromoacetic Acid.

**MCL (Maximum Contaminant Level):** The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

**MCLG (Maximum Contaminant Level Goal):** The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

**MNR:** Monitored, not regulated.

**MRDL (Maximum Residual Disinfectant Level):** The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

**MRDLG (Maximum Residual Disinfectant Level Goal):** The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

**NA:** Not Applicable.

**ND:** None Detected.

**NTU:** Nephelometric turbidity units.

**ppb (Parts per Billion):** One part substance per billion parts water (or micrograms per liter).

**pCi/L (Picocuries per Liter):** Measurement of the natural rate of disintegration of radioactive contaminants in water (also beta particles).

**ppm (Parts per Million):** One part substance per million parts water (or milligrams per liter).

**ppt (Parts per Trillion):** One part substance per trillion parts water (or nanograms per liter).

**SMCL (Secondary Maximum Contaminant Level):** Non-enforceable guidelines regulating contaminants that may cause cosmetic or aesthetic effects in drinking water.

**Total Dissolved Solids:** An overall indicator of the amount of minerals in water.

**TT (Treatment Technique):** A required process intended to reduce the level of a contaminant in drinking water.

**TTHM (Total Trihalomethanes):** Consist of Chloroform, Bromoform, Bromodichloromethane and Dibromochloromethane.

**UCMR (Unregulated Contaminant Monitoring Rule):** Unregulated substances are measured, but maximum contaminant levels have not been established by the government.

# WHAT'S IN YOUR WATER

## HOW TO READ YOUR WATER QUALITY TABLE

Below, you'll see an analysis of your drinking water. Here's an example of how to read these tables:

Start here and read across	2019 or year prior	The goal level for that substance	Highest level of substance allowed	Highest amount that was found	Highest and lowest amounts found	Yes means the amount found is below gov't requirements	Where substance usually originates
Substance (units)	Year Sampled	MCLG	MCL	Highest Amount Detected	Range of Detections	Compliance Achieved	Typical Sources

## YOUR WATER QUALITY TABLE

The data shown in the tables below are results from commercial laboratories certified in drinking water analysis by the State of New Mexico.

The table shows what substances were detected in your drinking water during 2019 or the last required sampling period within the last five years.

### Regulated Substances Measured in the Water Leaving the Treatment Facility

Substance (units)	Year Sampled	MCLG	MCL	Highest Amount Detected	Range of Detections	Compliance Achieved	Typical Sources
Barium (ppb)	2017	200	200	0.5	0.3 - 0.5	YES	Erosion of natural deposits; discharge of drilling wastes; discharge from metal refineries
Fluoride (ppm)	2017	4.0	4.0	0.27	0.17 - 0.27	YES	Erosion of natural deposits; discharge from fertilizer and aluminum factories
Nitrate (ppm)	2019	10	10	5.9 <sup>1</sup>	1.5 - 5.9	YES	Runoff from fertilizer use; leaching from septic tanks, sewage; erosion of natural deposits
Sodium (ppb)	2017	NA	MNR	27	20 - 27	YES	Erosion of natural deposits
Gross-Alpha-Excluding Radon and Uranium (pCi/L)	2014	0	15	8.8	1.6 - 8.8	YES	Erosion of natural deposits of certain minerals that are radioactive and may emit a form of radiation known as alpha radiation
Uranium (ppb)	2014	0	30	6	4 - 6	YES	Erosion of natural deposits
Combined Radium (226 and 228) (pCi/L)	2014	0	5	0.7	0.4 - 0.7	YES	Erosion of natural deposits

# WHAT'S IN YOUR WATER

## Regulated Substances Measured from the Water in the Distribution System

Substance (units)	Year Sampled	MCLG/MRDLG	MCL/MRDL	Highest Running Annual Average	Range of Detections	Compliance Achieved	Typical Sources
TTHMs (ppb)	2019	NA <sup>2</sup>	80	2.3	ND - 2.34	YES	By-product of drinking water disinfection
Chlorine Residual (ppm)	2019	4	4.0	0.7	0.3 - 0.8	YES	Water additive used to control microbes

## Tap Water Samples: Lead and Copper Results

Substance (units)	Year Sampled	MCLG	Action Level	Number of Samples	90th Percentile	Number of Samples Above Action Level	Compliance Achieved	Typical Sources
Copper (ppm)	2017	1.3	1.3	20	1.2	0	YES	Corrosion of household plumbing systems; erosion of natural deposits
Lead (ppb)	2017	0	15	20	9.3	1	YES	Corrosion of household plumbing systems; erosion of natural deposits

# WHAT'S IN YOUR WATER

## Unregulated Substances Measured in the Water Leaving the Treatment Facility

Substance (units)	Year Sampled	Range of Detections	Typical Sources
Hardness (grains/gallon)	2011	35 - 44	Natural calcium and magnesium content

**<sup>1</sup>Nitrate:** Nitrate in drinking water at levels above 10 ppm is a health risk for infants of less than six months of age. High nitrate levels in drinking water can cause blue baby syndrome. Nitrate levels may rise quickly for short periods of time because of rainfall or agricultural activity. If you are caring for an infant you should seek advice from your healthcare provider.

**<sup>2</sup>TTHM/HAA5:** Although there is no collective MCLG for this contaminant group, there are individual MCLGs for some of the individual contaminants:

- **Trihalomethanes:** bromodichloromethane (0.0 mg/L); bromoform (0.0 mg/L); dibromochloromethane (0.06 mg/L). Chloroform is regulated with this group but has no MCLG.
- **Haloacetic acids:** dichloroacetic acid (0.0 mg/L); trichloroacetic acid (0.3 mg/L). Monochloroacetic acid, bromoacetic acid and dibromoacetic acid are regulated with this group but have no MCLGs.

## ADDITIONAL MONITORING

In addition to the parameters listed in this table, other parameters were monitored for, including regulated pesticides, herbicides, petroleum by-products and metals. None of those parameters were detected in the water. If you have any questions about this report or your drinking water, please call our **Customer Care** team at **1-800-383-0834**.

EPCOR encourages feedback related to the quality of water that is provided to you. Please feel free to submit comments to us directly at [mywater@epcor.com](mailto:mywater@epcor.com). You may also provide feedback to the New Mexico Public Regulations Commission.

*In 2015, our water system did not collect monitoring samples required by the Stage 2 Disinfectants/Disinfectants Byproducts Rule. Although this incident was not an emergency, as our customers, you have the right to know what happened, and what we did to correct the situation.*

We are required to monitor your drinking water for specific contaminants on a regular basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. The following table lists the contaminants and the compliance periods of which we did not monitor correctly. Because these samples were not collected, we cannot be sure of the quality of our drinking water during the compliance time periods listed below.

Substance	Location – Distribution	Sampling Frequency	Compliance Period
Total Trihalomethanes (TTHMS) and Haloacetic Acids (HAA5)	TTHM-1 19 Horizon	Annual (August)	2015
Total Trihalomethanes (TTHMS) and Haloacetic Acids (HAA5)	HAA5-1, HYD25 City Line Rd/Newkirk	Annual (July)	2015

### What should you do?

There is nothing you need to do. You do not need to boil water or take other corrective actions. You may continue to drink the water. If a situation arises where the water is no longer safe to drink, you will be notified within 24 hours.

### What happened and what is being done?

The Stage 2 Disinfectant/Disinfectant Byproducts Rule sampling was completed in 2016 which resolved this issue. In addition, this required sampling was also completed in 2017, 2018, and 2019 and the TTHM and HAA5 concentrations met require state and federal safe drinking water standards in each of these years. EPCOR updated internal sampling scheduling procedures to prevent any future missed monitoring events.

Learn more about your  
water at [epcor.com](https://www.epcor.com).

**EPCOR**
